

Laser Scanning Mast Systems

An innovation in long distance aerial laser scanning

High Quality pneumatic telescopic mast systems for laser scanning

The Benefits

- Easily access areas that would usually be difficult or impossible to scan
- Overcome obstructions and buildings for line of site from the ground
- No need for costly drones and licences
- Lightweight, compact equipment for easy transportation, handling and setup
- Mast system deployed by one user in less than three minutes
- Can be used with all laser scanners on the market

Equipment Overview

- Portable telescopic masts recommended up to 12 metres
- Mast adapter brackets available to fit all types of laser scanner
- the versatile QPOD tripod can be used away from the mast in the same way as a conventional surveyors tripod – no need to carry two tripods saving on storage and transportation
- Two year guarantee on all product parts
- Full range of useful accessories available
- User training available
- CE approved, high quality products

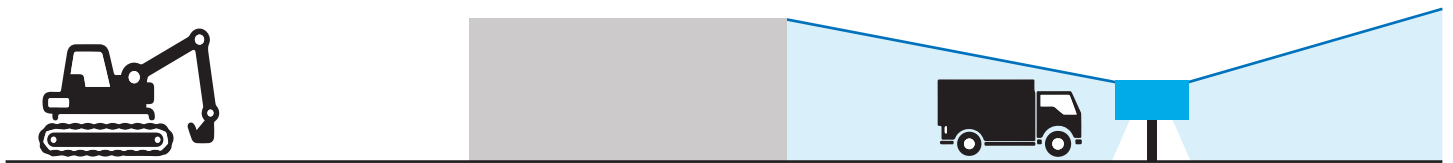

Laser Scanning Mast Systems

An innovation in long distance aerial laser scanning
